

WEATHER COATER™

Mineral Mix Protector

Weather Coater™ mineral mix protector is an all-natural weather protector product that coats and protects all salt-mineral mixes and mineral products from degradation and physical caking and crusting from the weather. Weather protected mineral mixes coat and protect all nutrients from the leaching and caking effects of rain, snow, humidity, sunlight and moisture. This helps keep the mineral mixes fresher, with less caking, as well as product crusting and helps ensure nutrient stability with better consumption and animal utilization of the mineral mix.

PRODUCT DESCRIPTION

Weather Coater™ mineral mix is a blend of modified cornstarch, and calcium carbonate

FEATURE-BENEFITS

- ✓ Low inclusion additive of .5% - 1% (10-20 lbs.) per ton of mineral mix or premix
Inclusion level is a function of particle size of product to protect
- ✓ Product safe and palatable for all animals – no harsh chemicals used
- ✓ No taste, odor, and white in color
- ✓ All-natural product – biodegradable and environment friendly
- ✓ Handles and mixes very well – can be used as a flow and anti-caking agent
- ✓ Repels rain, snow, moisture and humidity – reduces nutrient leaching and loss
- ✓ Reduces mineral caking, crusting and product hardening
- ✓ Can be used as a product dust for all high urea products to help prevent bridging and sticking of pellets
- ✓ Value added product with excellent competitive advantage of products
- ✓ Low cost in all formulations

DIRECTIONS FOR USE

Add 10-20 lbs. of Weather Coater™ mineral mix per ton of mineral mix. Add as last dry ingredient in the mixer to mix and blend well to coat all particles in mineral mix. If using liquid molasses, add molasses before adding Weather Coater™. Also, add Weather Coater™ before adding mineral oil or liquid fats and oils.
